Watch the DashDAQ Video First!

We created this video to run on the DashDAQ Series II in DEMO Mode. Click on the image to launch it:

What is DashDAQ? DashDAQ is a windshield-mounted cabin monitor that easily installs in seconds. DashDAQ's unique feature set allows you do many different things all from one screen:

Customizable Dashboard Display

- Display sensor data from the Factory OBD2 ECU, showing more data than the factory dashboard
- Customize your dashboard with your own background, graphics, and gauge layouts
- Expand your dashboard by adding analog inputs, serial devices, USB Host devices, and 3rd party products
- Replace the factory instrument cluster for hot rods and motor swap projects using one or more DashDAQs'

Data Logger and Flight Recorder

- Show info on gauges in real-time
 - Record to optional MMC/SD card, up to 4GB
 - Calculate Horsepower, Torque, and Performance
 - calculate MPG and set configurable trip counters
- Diagnostic Tool
- Find out why your check-engine light is on
 - Read and Clear Diagnostic Trouble Codes
 - View sensor data to figure out which parts may be defective
- GPS Navigation
- DashDAQ can connect to many different serial and USB GPS modules, ranging from 1Hz to 20 Hz.
 - Optional Linux-based navigation software being developed with Elektrobit can guide you to your destination
 - Run other Linux-based GPS software
